

# Exercise

## *Modeling in Power BI – Training Model I*

1. In your model, create all relevant relationships
2. Determine which columns should have a non-default sort order, and apply these
3. Create a calculated column Amount, containing Number times UnitPrice
4. Create some output for your model

# Exercise

## Calculated tables

1. Create a measure table with the formula:

```
ROW("ZZ", "OK")
```

2. Hide the column.
3. Create a measure Sales as the sum of the Amount values.  
Create some output.
