

Exercise

Calculated columns

1. *In the fSales table, create a calculated column to compute the transaction amount*
2. *Create a calculated column that displays the name of the product sold (hint: use the **RELATED()** function)*

Exercise

Measures

1. *Create a measure to compute the total revenue*
2. *Create a measure to compute the total number of items sold*
3. *Create a measure to compute the average price*

Use your measures in a report to see results!

Exercise

Query context

1. *Choose some data points in the demo report*
2. *What selections is this result based on?*
3. *What filters are present?*
