

Exercise

Filtering with CALCULATE()

1. *Create a measure to compute the revenue for all products, whatever the context is*
2. *Create a measure to compute the percentage of the revenue for a product (or group of products) compared to all products*
3. *Create a measure to compute, in any context, the revenue on the product with ProductNr 303*

Exercise

`CALCULATE()`

1. *Create a measure to compute the value of goods delivered*
2. *Create a measure that returns the revenue on product 304, only if that product is in the context*
